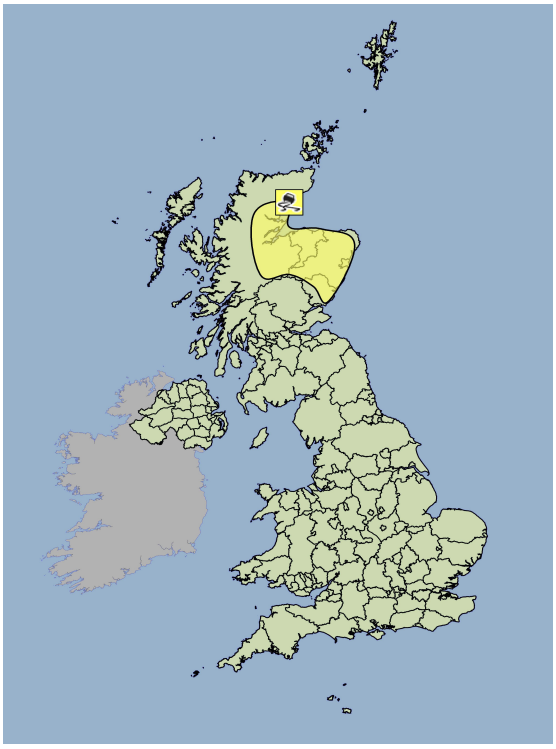
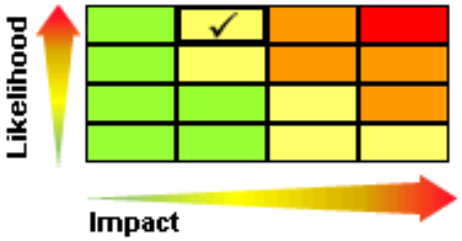
National Severe Weather Warning Service





Chief Forecasters Assessment
An area of sleet and upland snow is moving eastwards across parts of central and northeast Scotland. As it moves away this evening skies will clear and road temperatures will fall quickly below freezing in places, especially on higher routes where this will occur earliest. Ice is likely to form on untreated surfaces, especially where snow thaws and then re-freezes.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **19:00 on Sun, 26th Apr 2015** until **07:00 on Mon, 27th Apr 2015**

Periods of sleet and upland snow will largely die out during Sunday evening and as skies clear icy stretches are expected to form on untreated routes, especially on upland routes where snow has settled. The risk of ice will persist through the night but will quickly thaw after sunrise on Monday morning.

The public should be aware of the likelihood of some difficult driving conditions and travel disruption.
